For example, Charlie can type 675 words in 9 minutes. How many words can Charlie type in 13 minutes?

Rate problems (practice) | Intro to rates | Khan Academy  
Section 5.3 Solving Rate Problems 205 EXAMPLE 3 Solving a Rate Problem How high does the hot air balloon rise in 15 seconds? Method 1: Use the formula for distance.  $d = rt$  Write the formula for distance.  $= 9 \text{ meters} - 3 \text{ seconds}$  Substitute the given values.  $\times 15 \text{ seconds} = 45 \text{ meters}$  Multiply. The balloon rises 45 meters in 15 seconds. Method 2: Use a unit rate.  $9 \text{ meters} - 3 \text{ seconds} = 3 \text{ meters} - 1 \text{ second}$

5 3 Solving Rate Problems - Big Ideas Learning  
Sixth graders develop a variety of strategies for solving ratio and rate problems. For an example, consider this problem: The ratio of boys to girls in Ms. Wales's class is 3:2. If there are 30 students in the class, how many are boys and how many are girls? Students may solve this problem with a ratio table, as shown in the figure.

Solve Rate and Ratio Problems in Common Core Math - dummies  
The secret to solving all rate problems is creating a system of equationsto represent the situation. Speed as Rate. Speed is a familiar kind of rate. Common units used for speed include miles per hour, feet per second, and—in the case of very fast things, like light—miles per second.

Rate Problems - NROC  
Help students of grade 5 through high school to heighten their logical reasoning with this batch of meticulously drafted unit rate worksheets. Over 60 plus well-researched word problems based on unit rates, unitary method and comparing unit rates are featured here! Answer keys are provided below every worksheet.

Rates and Unit Rates Worksheets with Word Problems  
Solve the following rate problems. The distance between two cities on the map is 15 centimeters. The scales on the map is 5 centimeters to 15 kilometers. What is the real distance, in kilometers, between the two cities? A car consumes 10 gallons of fuel to travel a distance of 220 miles. Assuming a constant rate of consumption, how many gallons are needed to travel 330 miles? Ten tickets to a cinema theater costs \$66.
