A Mathematical Theory Of
Communication

HE recent development of various methods of modulation such as PCM and PPM which exchange bandwidth for signal-to-noise ratio has intensified the interest in a general theory of communication. A basis for such a theory is contained in the important papers of Nyquist¹ and Hartley² on this subject.

Communication

Voiceover: Shannon had just finished developing his theories related to cryptography and therefore was well aware that human communication was a mix of randomness and statistical dependencies. Letters in our messages were obviously dependent on previous letters to some extent. In 1949, he published a groundbreaking paper, "A Mathematical Theory of Communication". In it, he uses
