Theory of Evolution. In his book *The Origin of Species*, Darwin presented evidence for his “descent with modification” theory, which has come down to us as the theory of evolution, although Darwin avoided the term “evolution.”. Essentially, Darwin suggested that random variations take place in living things and that the environment selects those individuals better able to survive and reproduce.

Evidence for Evolution - CliffsNotes Study Guides

Evolution 5.4.1 Define evolution. Evolution is the cumulative change in the heritable characteristics of a population. 5.4.2 Outline the evidence for evolution provided by the fossil record, selective breeding of domesticated animals and homologous structures.

IB Biology Notes - 5.4 Evolution

Evolution implies a change in one or more characteristics in a population of organisms over a period of time. The concept of evolution is as ancient as Greek writings, where philosophers speculated that all living things are related to one another, although remotely.

Quiz Theory of Evolution - CliffsNotes Study Guides  
The importance of evolution to the study of biology was stated best by Theodosius Dobzhansky, who said, "Nothing in biology makes any sense except in the light of evolution." While most of biology attempts to describe what the natural world is like, evolution explains how and why it became that way. The forces that drive changes in species are ...
