Viewing a problem in general rather than specific terms. In the context of problem solving, abstraction is looking at a problem in general rather than specific terms. It includes strategies such as going back to first principles or using an analogy to model a problem. The idea is that by removing details the core problem emerges.

Data abstraction hides the details of a module from the rest of the program, whereas recursion is a repetitive technique that solves a problem by solving smaller versions of the same problems, much as images in facing mirrors grow smaller with each reflection.

Carrano & Henry, Data Abstraction & Problem Solving with ...  
Solving Problems To help yourself think about a problem you are solving more abstractly, it is useful to give yourself some distance from that problem. There are several ways to create that distance. Imagine that you are solving the problem for someone else rather than for yourself.
