~~PADI typically makes the students rip out and turn in the knowledge reviews so they can sell new students the same book. It's a pretty lame practice in my opinion. *rant over* We put the original Knowledge Reviews in the student folder as part of the record of training. We make copies of the KR to give to the student for their own use.~~

'New Frontiers in Marine Tourism' is the first book of this kind to address and analyse this burgeoning tourism sector comprehensively. By integrating aspects such as the sustainability, safety, education, experiences and management of diving tourism the text highlights a variety of pressing topics related to the management of diving tourism, including: * different types of diving locations and their particular characteristics and the geographical distribution of dive locations * the growth and economic significance of diving tourism in destinations worldwide * different motivations and typologies of diving tourists, their learning behaviour, knowledge of marine environments, and their interaction with flora and fauna. * diver satisfaction, attitudes and preferences, education and interpretation, and compliance with regulations * environmental impacts, and aspects of risk and health.

Scuba Confidential is a unique book packed full of valuable tips and expert advice, giving you unprecedented access to the secrets of dive professionals and technical divers. With Scuba Confidential, you will learn how to master skills and techniques that will make you a more confident, capable and safe diver. It offers an informed, balanced view on some of scuba diving's most contentious issues like going solo, deep diving and rebreathers and includes a comprehensive analysis of how diving accidents happen and how to make sure you do not become a statistic. Scuba Confidential also gives you valuable insights on a vast range of topics such as what it is like to do a cave diving course, how to make sure you buy the right equipment, what to consider when choosing an instructor, things even the pros get wrong and where to find the best diving in the world. This is candid, no-nonsense practical advice from a professional who has been involved over the last three decades with virtually every aspect of the sport. Have you ever wondered? How to look as comfortable in the water as the professionals do? What it is like to dive inside shipwrecks? Which training courses are most worthwhile? If you would make a good technical diver? If you should be considering a rebreather? How you can improve your diving skills? How you can reduce your air consumption? Why diving accidents happen and how to prevent them? Whether you might sometimes actually be safer solo diving? How to dive deep safely? Or How muck diving can possibly be any fun? Scuba Confidential has the answers to these questions and many more.

Technology and increasing levels of education have exposed people to more information than ever before. These societal gains, however, have also helped fuel a surge in narcissistic and misguided intellectual egalitarianism that has crippled informed debates on any number of issues. Today, everyone knows everything: with only a quick trip through WebMD or Wikipedia, average citizens believe themselves to be on an equal intellectual footing with doctors and diplomats. All voices, even the most ridiculous, demand to be taken with equal seriousness, and any claim to the contrary is dismissed as undemocratic elitism. Tom Nichols' The Death of Expertise shows how this rejection of experts has occurred: the openness of the internet, the emergence of a customer satisfaction model in higher education, and the transformation of the news industry into a 24-hour entertainment machine, among other reasons. Paradoxically, the increasingly democratic dissemination of information, rather than producing an educated public, has instead created an army of ill-informed and angry citizens who denounce intellectual achievement. When ordinary citizens believe that no one knows more than anyone else, democratic institutions themselves are in danger of falling either to populism or to technocracy or, in the worst case, a combination of both. An update to the 2017breakout hit, the paperback edition of The Death of Expertise provides a new foreword to cover the alarming exacerbation of these trends in the aftermath of Donald Trump's election. Judging from events on the ground since it first published, The Death of Expertise issues a warning about the stability and survival of modern democracy in the Information Age that is even more important today.

The best-selling authoritative resource returns updated and better than ever. Scuba Diving, Fifth Edition, is the most up-to-date resource for experiencing secure, satisfying dives. Packed with full-color photographs and detailed diving instruction, this is the ideal companion for recreational divers, diving instructors, and students. Veteran instructor Dennis Graver shares the latest research, science, and recommendations as well as nearly 40 years of diving experience. He demystifies complex topics such as gas laws and the physics and physiology of scuba. You'll also learn these skills: • Equalize pressure in the sinuses, ears, and mask. • Follow boat diving and buddy check procedures. • Master the nuances of dive planning and decompression so that every dive is safe and enjoyable. • Choose, use, and maintain scuba equipment. • Safely enjoy the underwater environment, including aquatic wildlife. • Prevent or manage underwater emergencies and hazards. In this new edition you'll find Application of Knowledge (AOK) questions and answers. For the first time, you'll be able to apply the information and guidelines to real-world scuba problems, making you better prepared for those unexpected situations you might encounter. Whether you are a beginning or intermediate diver or diving instructor, make sure you have all the bases covered before you go underwater. Scuba Diving will ensure a safe, successful, and rewarding dive every time you take the plunge.

From Snorkelers to Scuba Divers in the Elementary Science Classroom: Strategies and Lessons That Move Students Toward Deeper Learning By John Almarode and Ann M. Miller. Inspire a deep and lasting love of science in young students With so much attention paid to student performance in science, it is imperative for teacher to foster prolonged interest and deep conceptual understanding from an early age. From Snorkelers to Scuba Divers combines the latest findings in the science of learning with student and teacher-tested techniques to provide the framework for encouraging young learners to shed their snorkels and plunge into

the world of science. Readers will find: Evidence-based, research-driven strategies that encourage both deep thinking and conceptual understanding Classroom examples that demonstrate each aspect of the standards-based instructional framework in action Professional development tasks that provide teachers with support in implementing strategies for students at all levels, from surface to deep
